BASIC-ABSTRACT:

NOVELTY - Pharmaceutical agent comprises a compound prepared by reacting a compound containing free amino group with a reducing sugar. The compound containing the free amino group is release with a change in pH.

USE - For delivering a compound e.g. a peptide, a protein or an amino acid (preferably insulin) to a target, releasing the compound at the site to specifically treat the site with the compound.

ADVANTAGE - Preparation has increased in vivo retentivity and thus improved sustained effects.
